

CAPACITY AVAILABILITY AT GREECE-ITALY INTERCONNECTION

October 19th, 2015

Terna and ADMIE inform market participants that a fault is affecting the undersea part of the link between Italy and Greece.

Following the outage of the link, the NTC on the Italian-Greek interconnection has been set to zero since October 13th.

Terna and ADMIE are carrying out all the necessary measures to fix the issue as soon possible but presently it is not yet possible to forecast when the link between Italy and Greece will be back in operation.

For this reason, no monthly capacity will be allocated for November 2015 on the Italy-Greece interconnection.

Terna and ADMIE will do their best to timely inform market participants through their web sites about the evolution of the restoration activities.
