

TERNA: FIRST ELECTRICITY COMPANY TO OBTAIN UNI 11961:2024 ATTESTATION

Certification awarded by RINA and extended to the Group's main companies for integrated compliance activities

The certification recognizes the ability to develop a structured and integrated approach to corporate compliance

Rome, 28 July 2026 – Terna, together with the Group's main companies (Terna Rete Italia, Terna Energy Solutions and Terna Plus), is the first company in the electricity sector to obtain UNI 11961:2024 certification, *"Guidelines for the Integration of Compliance Management Systems Supporting Organizational, Management and Control Models and Supervisory Bodies in accordance with Legislative Decree 231/2001"*, a tangible tool supporting supervisory and control activities.

The certification, issued by RINA, a multinational certification body operating in more than 70 countries around the world, recognizes the Group led by Pasqualino Monti for its ability to design and implement effective models based on the principles and requirements of national and international technical standards. It acknowledges the Group's structured and integrated approach to corporate compliance, creating an effective link between management systems (particularly UNI ISO 37301) and the Organizational, Management and Control Models pursuant to Legislative Decree 231/2001.

This achievement forms part of a broader path aimed at strengthening the Group's compliance culture: the certification complements existing management systems and other governance tools, providing an additional assurance of the effectiveness of compliance, supervisory and control activities.
